

7-Day Distress Signal Diary

*Identify the patterns your body has been
trying to tell you for years.*

Seven days of precise observation — morning, midday, evening.

One diary. One method. The pattern that repeats

is the signal worth addressing first.

HOW TO USE THIS WORKBOOK

1. Complete one column each day — morning, midday, evening.
2. After seven days, read across each row to find repeating signals.
3. Use the Pattern Guide on the final pages to interpret your results.

Your Body Has Been Keeping Score.

This diary helps you read it.

Every symptom you experience — the 3 AM waking, the afternoon collapse, the morning brain fog, the evening restlessness — is a message from a specific organ system, operating within a precise 24-hour biological schedule.

This is not guesswork. The organ clock (Horarium) is a clinically documented framework that maps peak function windows to each major organ system. When an organ is under pressure, it signals during its active window — reproducible, consistent, and clinically meaningful.

Seven days of honest observation is enough to identify your primary regulatory pattern. Complete one column per day. Read across after seven days. The signal that repeats is the one worth addressing first.

SCORING GUIDE (1–5 scale used throughout this diary)

- 1** Absent / None — no symptom or difficulty present
- 2** Mild — present but manageable, not disruptive
- 3** Moderate — noticeable, affects function periodically
- 4** Significant — consistently present, affects daily capacity
- 5** Severe — dominant feature of that day, very disruptive

QUICK REFERENCE — NIGHT WAKING WINDOWS

If you wake consistently at the same time, note the organ window:

TIME WINDOW	ORGAN	SIGNAL
23:00–01:00	Gallbladder	Rumination, unresolved decisions, temporal headache
01:00–03:00	Liver	Heat, racing thoughts, night sweats, emotional charge
03:00–05:00	Lung	Respiratory tightness, unexplained sadness, sighing
05:00–07:00	Large Intestine	Early waking, abdominal movement, urgency

		DAY 1	DAY 2	DAY 3	DAY 4
DATE _____					
MORNING					
Wake time	e.g. 07:00 / earlier / later _____				
Night waking – time(s)	e.g. 02:30, 04:00 _____				
Sleep quality	1–5 _____				
First sensation on waking	e.g. tension, heaviness, clear _____				
Emotional tone on waking	e.g. anxious, calm, flat _____				
MIDDAY					
Energy at 11:00	1–5 _____				
Digestive symptoms after eating	e.g. none, bloating, heavy _____				
Mental clarity at 12:00	1–5 _____				
Physical tension – where?	e.g. neck, shoulders, none _____				
EVENING					
Energy at 17:00	1–5 _____				
Afternoon dip 13:00–15:00?	Y / N _____				
Emotional tone – late afternoon	e.g. irritable, steady, flat _____				
Tension at end of day – where?	e.g. jaw, chest, none _____				
Time of last meal	e.g. 19:30 _____				

		DAY 5	DAY 6	DAY 7
DATE _____				
MORNING				
Wake time	e.g. 07:00 / earlier / later	_____	_____	_____
Night waking – time(s)	e.g. 02:30, 04:00	_____	_____	_____
Sleep quality	1–5	_____	_____	_____
First sensation on waking	e.g. tension, heaviness, clear	_____	_____	_____
Emotional tone on waking	e.g. anxious, calm, flat	_____	_____	_____
MIDDAY				
Energy at 11:00	1–5	_____	_____	_____
Digestive symptoms after eating	e.g. none, bloating, heavy	_____	_____	_____
Mental clarity at 12:00	1–5	_____	_____	_____
Physical tension – where?	e.g. neck, shoulders, none	_____	_____	_____
EVENING				
Energy at 17:00	1–5	_____	_____	_____
Afternoon dip 13:00–15:00?	Y / N	_____	_____	_____
Emotional tone – late afternoon	e.g. irritable, steady, flat	_____	_____	_____
Tension at end of day – where?	e.g. jaw, chest, none	_____	_____	_____
Time of last meal	e.g. 19:30	_____	_____	_____

Reading Your Pattern

Read across each row from Day 1 to Day 7. Circle or highlight any signal that appears on 4 or more days. These are your primary regulatory signals.

Count how many circled signals fall under MORNING vs EVENING. Which pattern below do they most closely resemble?

PATTERN I

Stasis Vis Vitalis

Sympathetic Lock

- ☒ Difficulty falling asleep
- ☒ Waking wired at 03:00–04:00
- ☒ Tense / irritable emotional tone
- ☒ Tension: neck, shoulders
- ☒ Evening restlessness

☒ Second wind after 21:00

PATTERN II

Deficientia Sanguinis

Neuro-Nutritive Depletion

- ☐ Falling asleep but waking early
- ☐ Dream-disturbed, unrefreshing sleep
- ☐ Flat / grey emotional tone
- ☐ Physical: heavy, hollow feeling
- ☐ No morning appetite

☐ Bone-deep fatigue in afternoon

MIXED PATTERN

Signals present in both columns within 4 points of each other? Work the complete Evening Anchor Protocol.

Do not prioritise individual elements — the mixed pattern requires the full sequence.

If you experience...	Your system under pressure...	Biological reason
Waking 01:00–03:00, heat or racing thoughts	Liver — Systema Hepaticum	Cytochrome P450 peak disrupted by reduced hepatic blood flow
Waking 03:00–05:00, tightness or sadness	Lung — Systema Respiratorium	Acid-base regulatory cycle incomplete
Waking wired at 03:00–04:00	HPA Axis (cortisol)	Pre-emptive cortisol spike from circadian desynchrony
Dream-disturbed sleep, no true rest	Deficientia Sanguinis	Insufficient tryptophan for melatonin synthesis
Rumination 23:00–01:00, lying awake	Gallbladder — Vesica Fellea	Incomplete SNS-to-PNS handover, open cognitive loops
Afternoon collapse 13:00–15:00	Small Intestine	Postprandial parasympathetic demand exceeding autonomic reserve
Bone-deep fatigue, late afternoon	Kidney / Adrenal	Constitutional reserve depletion, HPA axis declining
Second wind after 21:00, physical heat	Stasis Vis Vitalis	Sympathetic-dominant loop with thermal overflow
Drowsiness after meals, heavy feeling	Stomach / Spleen-Pancreas	Mitochondrial inefficiency, inadequate ATP for digestion
Temporal headache, one-sided, evening	Gallbladder — Vesica Fellea	Bile concentration cycle disrupted, vascular pressure rising

My Pattern Notes

The signal that repeated most often (4+ days):

The time of night waking (if any):

The pattern that most closely fits my diary:

The most disruptive symptom this week:

One change I will make first:
